FEEL YOUR HEART

SPIDER

CARBON GRAVEL

BEYOND BORDERS.

In the heart of Cusano Milanino, where every frame is born from passion and artisanal mastery, **Spider** comes to life: not just a bicycle, but an invitation to challenge your own limits, to measure yourself against the trail and the horizon as one.

This duality—**technical and visceral**—is the starting point. Spider is “conceived with the heart in Cusano Milanino and tested on the riversides of Brianza.”

Picture the banks of Brianza: gravel, dirt, bends, dust—this is where Spider was put to the test.

The full-carbon frame, weighing just 900 g (fork 420 g), is more than a number; it’s a statement: lightness that calls you to attack, geometry that responds to your every move.

Here, emotion isn’t an accessory—it’s part of the design itself.

Feeling the wide handlebar, sinking into the rough terrain, anticipating a curve, rising from the saddle—and then... a free sprint on the tarmac.

It’s a story in motion, and Spider is the pen that writes its marks on gravel, on road, on unseen horizons.

And it carries style along the way—because yes, it’s “a true De Rosa.”

Let's get to the point: Spider is not just evocation, but real technical substance—designed to deliver both freedom and performance.

The frame is built in full-carbon monocoque, with a declared weight of 900 g.

The fork is also carbon, offering clearance for tires up to 44 mm (some sources say “up to 45 mm”) to ensure grip and comfort across mixed terrain.

Its geometry is “racing-balanced for speed and control.”

This means Spider handles nimbly on technical singletracks but stays composed when the scenery changes and the ride moves to tarmac or fast gravel.

The rear stays with their “dual symmetrical dropout” design enhance stability, the increased bottom bracket height helps in muddy conditions, and the multiple mounting points make it ready for bikepacking and longer adventures.

WHAT YOU'LL LOVE

You'll love the way it comes to life beneath you.

It never bursts out—it grows, pedal after pedal—like trust taking shape, like a bond born from subtle sensations: the stability over uneven ground, the precision of the steering, the silence of absorbed vibrations.

Spider doesn't aim to impress; it aims to convince.

You'll love it because it doesn't force you to choose between speed and adventure. On the road, it glides with the ease of a racing bike, but leave the asphalt behind and a different character reveals itself: flexible, responsive, free.

That's where you feel the lightness of the frame, the steady control, the instant response of carbon.

It's a bike that doesn't hold you back—it moves with you.

You'll love its balance—

that blend of elegance and character that doesn't shout, but leaves a mark.

Every line, every curve of the frame expresses a functional aesthetic, essential yet full of personality.

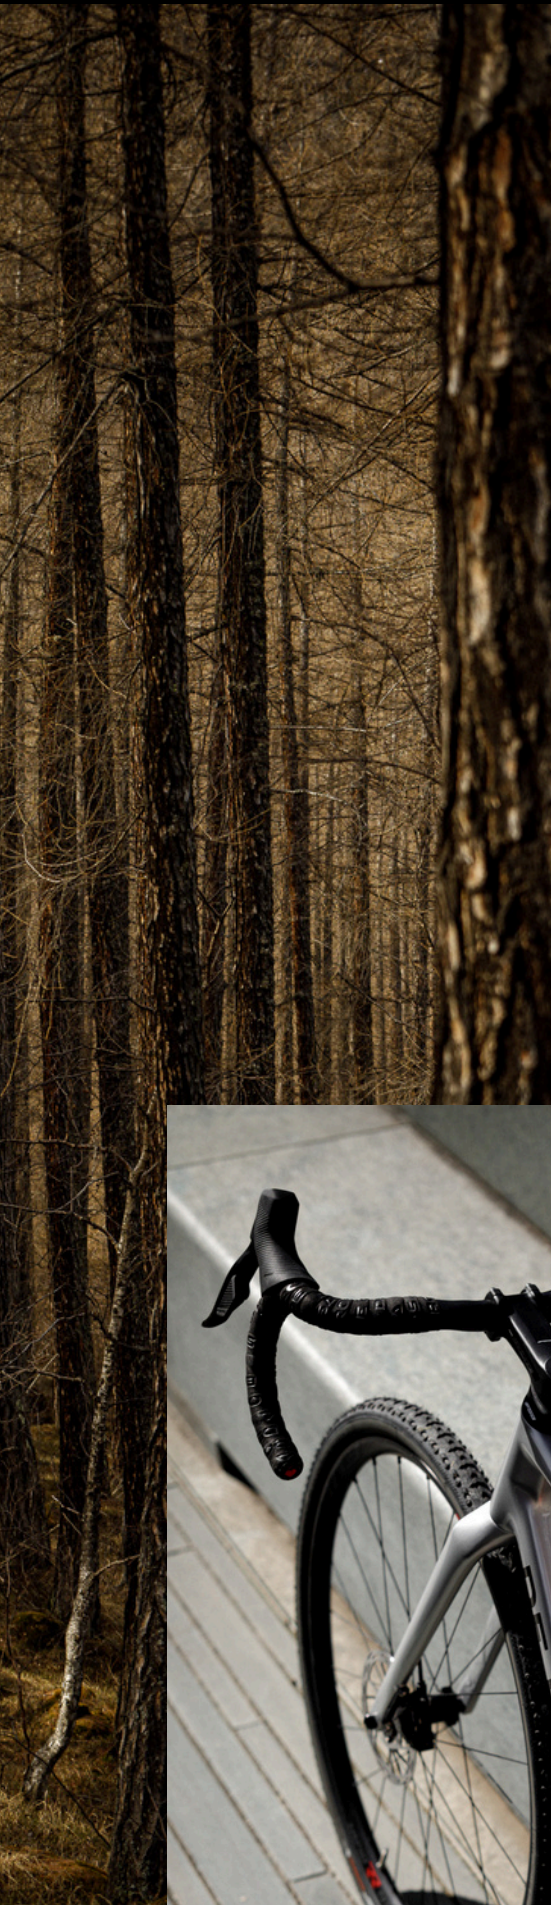

There's the artisanal touch of Cusano Milanino, and the modern soul of those who look ahead without forgetting their roots.

You'll love it because it doesn't speak in numbers, but in emotions.

Because the more you ride it, the more you understand it.

And the more you understand it, the more you'll want to go far.

Here are some details that stand out at first glance:

- Internal cable routing ensures a clean look and protects both electronic and mechanical systems.
- Compatibility with both 1× and 2× groupsets and flat-mount disc brakes delivers modern versatility.
- Six frame sizes are available, so every rider can find the perfect fit—and with it, maximum comfort in the saddle.

But there's one element that perhaps resonates above all: freedom.

Freedom to choose whether to get “dirty” on the trail or fly over the tarmac.

Freedom from the anxiety of the terrain, from the thought “this bike can't.”

Spider can. The idea of a “fast gravel” finally becomes real.
